Hose Type 13/4HHT®

High Temperature

ID13 - Series: C

Applications

Oil and Gas: Methanol service (oil rigs, distribution panels, umbilicals), jumper/ subsea well control, chemical

injection, control of subsea hydraulic components, nitrogen service, Gaseous media handling

Technical Information

| Inner Core: | Polyvinylidenfluoride (PVDF) |
|-------------------|-------------------------------------|
| Pressure Support: | 4 layers of high-tensile steel wire |
| Outer Cover: | Polyvinylidenfluoride (PVDF) |
| Colour: | Grey |
| Temperature: | -20°C to +150°C [-4°F to 300°F] |

| ØID | Ø OD | Working (SF 3,3:1) | Pressure (SF 4,0:1) | Burst Pressure | Bend Radius | Weight | Insert ID |

outer diameter (mm)

In case of accidental leakage when transferring hot medium through SPIR STAR hoses the potential for injury exists from escaping fluids at high temperature (up to 150 C or 300F) while under pressure. When used for this purpose SPIR STAR HT series hoses should only be used when there is appropriate protecting devices in place to rule out the possibility of injury. The protecting devices may be removed only (e.g. for repairs) after the hose assembly has been depressurized and cooled to ambient temperature.

Production-related variations of the burst pressure of up to 5 % are possible. Other colours upon request.

Maximum test pressure 1290 bar/18700 psi.

The safety factors between the burst pressure and the working pressure as well as the test pressure depend on the operating conditions. For gaseous media the outer cover is to be pinpricked.

Regarding the safety factor for gaseous media please contact your local SPIR STAR® assembling center. The indicated working pressure refers to the hose only. Depending on the used fitting the permitted working pressure of a hose assembly may be less.
